

Using XPATH for web scraping

Example 3. Product price scraping from <https://nepalfoods.gov.np/>

```
In [ ]: library(rvest) #see https://rvest.tidyverse.org/articles/harvesting-the-web.html for details
library(dplyr)

#Loading webpage content
webpage <- read_html("https://nepalfoods.gov.np/")
```

```
In [2]: category <- webpage %>% html_nodes(xpath = "//div[@class='product-category']") %>% html_text(trim=TRUE)
length(category)
head(category)

product <- webpage %>% html_nodes(xpath = "//h2") %>% html_text(trim=TRUE)
length(product)
head(product)

price <- webpage %>% html_nodes(xpath = "//div[@class='product-price']") %>% html_text(trim=TRUE)
length(price)
head(price)
```

27

'अन्य' · 'अन्य' · 'चामल' · 'चामल' · 'चामल' · 'दाल'

27

'उवा १ केजी' · 'चियापत्ती ५०० ग्राम' · 'Long Grain चामल १० केजी' · 'हुम्लाको कागुनोको चामल १ केजी' · 'हुम्लाको चिनोको चामल १ केजी' · 'कर्णालीको सिमि १ केजी'

27

'NPR 200.00' · 'NPR 270.00' · 'NPR 1780.00' · 'NPR 260.00' · 'NPR 260.00' · 'NPR 240.00'

```
In [3]: #creating dataframe from category, product, and price list
df <- data.frame(category, product, price)
df <- df %>% arrange(category)
head(df)

#saving dataframe
write.csv(df, file = "example3.csv", row.names=FALSE)
```

A data.frame: 6 × 3

| | category | product | price |
|---|----------|--|-------------|
| | <chr> | <chr> | <chr> |
| 1 | अन्य | उवा १ केजी | NPR 200.00 |
| 2 | अन्य | चियापत्ती ५०० ग्राम | NPR 270.00 |
| 3 | अन्य | टाइमपास टाइचिन चिउरा १ केजी | NPR 100.00 |
| 4 | अन्य | गहुँ आटा 5 केजी | NPR 360.00 |
| 5 | अन्य | डी.डी.सी डेरी घ्यू १/२ लि | NPR 580.00 |
| 6 | अन्य | STC ग्यास सिलिण्डर(Exchange only STC Cylinder) | NPR 1910.00 |

Example 4. Extract information on Top Box Office movies from <https://www.imdb.com/chart/boxoffice>

```
In [4]: #Loading webpage content
webpage <- read_html("https://www.imdb.com/chart/boxoffice")
```

```
In [5]: movie <- webpage %>% html_nodes(xpath = "//a[@class='ipc-title-link-wrapper']") %>% html_text(trim=TRUE)
length(movie)
print(movie)

weekend_gross <- webpage %>% html_nodes(xpath = "//span[contains(., 'Weekend Gross:')] /parent::*/span[2]") %>% html_text(trim=T
```

```

length(weekend_gross)
print(weekend_gross)

total_gross <- webpage %>% html_nodes(xpath = "//span[contains(.,'Total Gross:')]//parent::*/span[2]") %>% html_text(trim=TRUE)
length(total_gross)
print(total_gross)

weeks_released <- webpage %>% html_nodes(xpath = "//span[contains(.,'Weeks Released:')]//parent::*/span[2]") %>% html_text(trim=TRUE)
length(weeks_released)
print(weeks_released)

rating <- webpage %>% html_nodes(xpath = "//span[@data-testid='ratingGroup--imdb-rating']") %>% html_text(trim=TRUE)
length(rating)
print(rating)

```

10

```

[1] "1. Inside Out 2"
[2] "2. Bad Boys: Ride or Die"
[3] "3. Kingdom of the Planet of the Apes"
[4] "4. The Garfield Movie"
[5] "5. IF"
[6] "6. The Watchers"
[7] "7. Furiosa: A Mad Max Saga"
[8] "8. The Fall Guy"
[9] "9. The Strangers: Chapter 1"
[10] "10. The Lord of the Rings: The Fellowship of the Ring"

```

10

```

[1] "$154M" "$34M" "$5.5M" "$4.8M" "$3.6M" "$3.5M" "$2.6M" "$1.6M" "$759K"
[10] "$633K"

```

10

```

[1] "$154M" "$113M" "$158M" "$78M" "$101M" "$14M" "$63M" "$88M" "$34M"
[10] "$319M"

```

10

```

[1] "1" "2" "6" "4" "5" "2" "4" "7" "5" "2"

```

10

```

[1] "8.0 (16K)" "7.0 (19K)" "7.2 (53K)" "5.8 (8.4K)" "6.7 (14K)"
[6] "5.8 (6.9K)" "7.8 (85K)" "7.0 (101K)" "4.7 (11K)" "8.9 (2M)"

```

```
In [6]: df <- data.frame(movie, weekend_gross, total_gross, weeks_released, rating)
df

write.csv(df, file = 'example4.csv', row.names=FALSE)
```

A data.frame: 10 × 5

| movie | weekend_gross | total_gross | weeks_released | rating |
|---|---------------|-------------|----------------|------------|
| <chr> | <chr> | <chr> | <chr> | <chr> |
| 1. Inside Out 2 | \$154M | \$154M | 1 | 8.0 (16K) |
| 2. Bad Boys: Ride or Die | \$34M | \$113M | 2 | 7.0 (19K) |
| 3. Kingdom of the Planet of the Apes | \$5.5M | \$158M | 6 | 7.2 (53K) |
| 4. The Garfield Movie | \$4.8M | \$78M | 4 | 5.8 (8.4K) |
| 5. IF | \$3.6M | \$101M | 5 | 6.7 (14K) |
| 6. The Watchers | \$3.5M | \$14M | 2 | 5.8 (6.9K) |
| 7. Furiosa: A Mad Max Saga | \$2.6M | \$63M | 4 | 7.8 (85K) |
| 8. The Fall Guy | \$1.6M | \$88M | 7 | 7.0 (101K) |
| 9. The Strangers: Chapter 1 | \$759K | \$34M | 5 | 4.7 (11K) |
| 10. The Lord of the Rings: The Fellowship of the Ring | \$633K | \$319M | 2 | 8.9 (2M) |

Practice 2. From <https://www.imdb.com/chart/moviemeter>, prepare a table of most popular movies with movie name, year, length, and ratings.

```
In [7]: #Loading webpage content
webpage <- read_html("https://www.imdb.com/chart/moviemeter")
```

```
In [8]: movie <- webpage %>% html_nodes(xpath = "//div[contains(@class,'cli-children')]/div[2]") %>% html_text(trim=TRUE)
length(movie)
movie

year <- webpage %>% html_nodes(xpath = "//div[contains(@class,'cli-children')]/div[3]/span[1]") %>% html_text(trim=TRUE)
length(year)
year

length <- webpage %>% html_nodes(xpath = "//div[contains(@class,'cli-children')]/div[3]/span[2]") %>% html_text(trim=TRUE)
length(length)
length

grading <- webpage %>% html_nodes(xpath = "//div[contains(@class,'cli-children')]/div[3]/span[3]") %>% html_text(trim=TRUE)
length(grading)
grading

rating <- webpage %>% html_nodes(xpath = "//div[contains(@class,'cli-children')]/span/div/span[1]") %>% html_text(trim=TRUE)
length(rating)
rating
```

25

```
In [9]: df <- data.frame(movie, year, length, rating)
write.csv(df, file = 'practice2.csv', row.names=FALSE)
```

Web scraping using for loop

If you look at the above example, you will notice that grading is missing for a movie. In this case, creating a balanced table is not possible. To resolve this issue, we need to use looping.

```
In [10]: elems <- webpage %>% html_nodes(xpath = "//div[contains(@class,'cli-children')]")

movie <- c()
year <- c()
length <- c()
rating <- c()
grading <- c()

for (e in elems) {
  val <- e %>% html_nodes(xpath = "div[2]") %>% html_text(trim=TRUE)
  movie <- c(movie, ifelse(length(val) == 0, "", val))

  val <- e %>% html_nodes(xpath = "div[3]/span[1]") %>% html_text(trim=TRUE)
  year <- c(year, ifelse(length(val) == 0, "", val))

  val <- e %>% html_nodes(xpath = "div[3]/span[2]") %>% html_text(trim=TRUE)
  length <- c(length, ifelse(length(val) == 0, "", val))

  val <- e %>% html_nodes(xpath = "div[3]/span[3]") %>% html_text(trim=TRUE)
  grading <- c(grading, ifelse(length(val) == 0, "", val))

  val <- e %>% html_nodes(xpath = "span/div/span[1]") %>% html_text(trim=TRUE)
  rating <- c(rating, ifelse(length(val) == 0, "", val))
}
```

```
In [11]: df <- data.frame(movie, year, length, grading, rating)
head(df)
write.csv(df, file = 'practice2_forloop.csv', row.names=FALSE)
```

A data.frame: 6 × 5

| | movie | year | length | grading | rating |
|---|-------------------------|-------|--------|---------|------------|
| | <chr> | <chr> | <chr> | <chr> | <chr> |
| 1 | Hit Man | 2023 | 1h 55m | R | 7.0 (43K) |
| 2 | Bad Boys: Ride or Die | 2024 | 1h 55m | R | 7.0 (19K) |
| 3 | Inside Out 2 | 2024 | 1h 36m | PG | 8.0 (16K) |
| 4 | Furiosa: A Mad Max Saga | 2024 | 2h 28m | R | 7.8 (85K) |
| 5 | Sous la Seine | 2024 | 1h 44m | TV-MA | 5.2 (18K) |
| 6 | The Watchers | 2024 | 1h 42m | PG-13 | 5.8 (6.9K) |
